

Super Intelligent Transportation

Marie-Pauline van Voorst tot Voorst STT Netherlands Study Centre for Technology Trends

CRITIS, September 16, 2013

Overview

 STT Netherlands Study Centre for Technology Trends

- Foresight study Super Intelligent Transportation
 - Context
 - Building blocks
 - 3 transportation concepts

STT Netherlands Study Centre for Technology Trends

- Independent, since 1968
- STT develops inspiring visions on the future of technology and society.
- STT creates a free space in which stakeholders from industry, government, knowledge institutions and NGOs meet each other.

Need for transportation changes

Technology changes the mode and need for transportation

Transportation on Demand

- Consumers no longer own means of transportation.
- Companies offer individual transportation services.
- Autonomous transportation: Transportation at your service.

What is already present on a small scale?

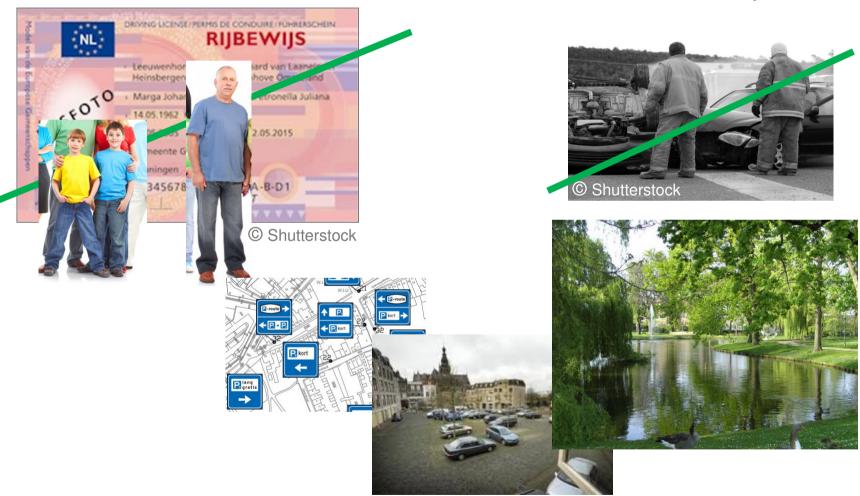

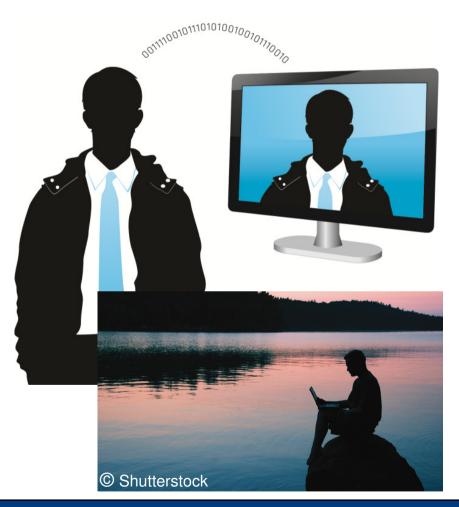

Interaction with society

'Non-Transportation'

- Virtual travelling is a large scale and full alternative to physical travelling.
- Always at home: the 'home traveller'.
- Always on the move: the new nomad wanders around in his own cocoon.

Interaction with society

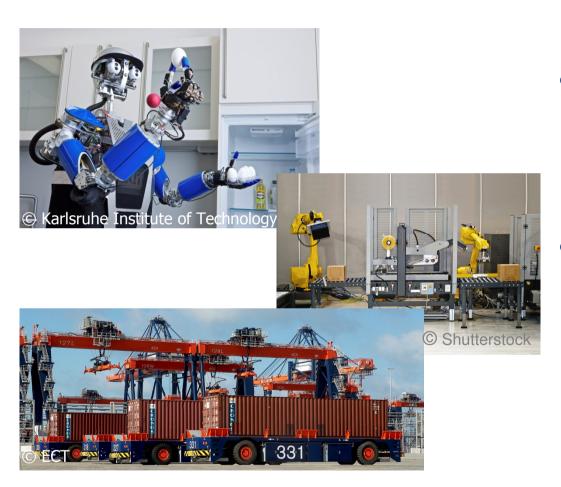

Telepresence Café

ICT infrastructure

No men in sight

- Endproducts find their way to the consumer autonomously.
- Smart agents take care of logistic handling.

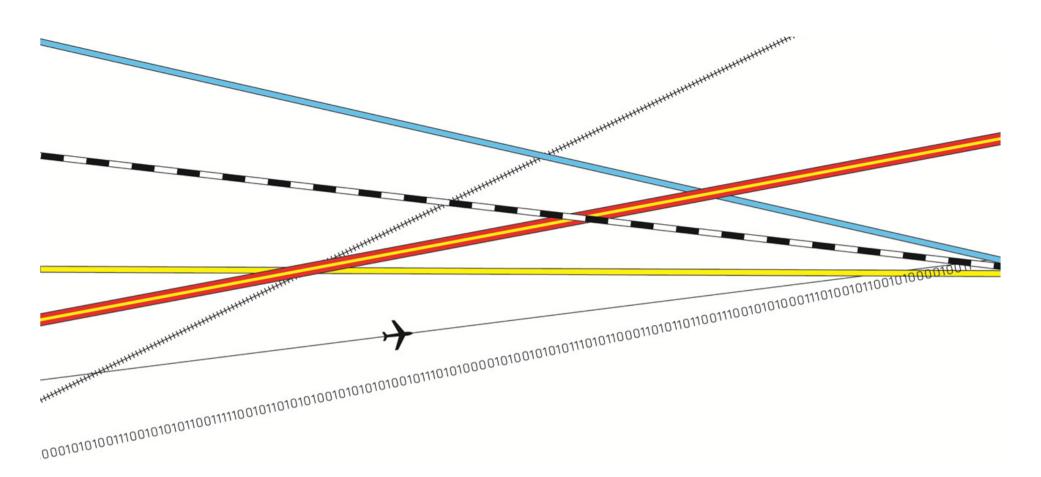

Main findings

- Individuals will increasingly take a central position in the transportation system.
- Technology will offer solutions for individual and societal issues related to transportation.
- Typically, no adequate attention is paid to the interrelationship between transportation and society.
